Third International Symposium on Wind Energy Systems

Copenhagen. August 26-29, 1980

LIST OF PAPERS PRESENTED

	Page
<b>SESSION A: NATIONAL SCALE WIND POWER SYSTEMS</b>	
A1 The current perspective on wind power based on recent U.S. results. L.V. Divone, Department of Energy, Wind Systems Branch, U.S.A.	1
A2 Assessment of offshore siting of wind turbine generators. D. Lindley, P.B. Simpson, Taywood Engineering Ltd., U.K. U. Hassan, ERA Technology Ltd., U.K., and D. Milborrow, Central Electricity Research Laboratories, U.K.	17
A3 Wind power generation for national and regional grid systems; design proposals for generation and transmission. R. Freer, Scottish Offshore Partnership, U.K.	43
A4 A review of the SERI wind energy innovative systems program. I.E. Vas and P. South, Solar Energy Research Institute, U.S.A.	61
<b>SESSION B: WIND REGIMES, SITING</b>	
B1 Sites for wind-power installations: Physical modelling of the wind field of Kahuku Point, Oahu, Hawaii. H.C. Chien, R.N. Meroney and V.A. Sandborn, Colorado State University, U.S.A.	75
B2 Wind energy assessment of the Palm Springs-Whitewater region, California, U.S.A. P.B.S. Lissaman, T.G. Zambrano and S.N. Walker, AeroVironment Inc. U.S.A.	91
B3 Standard deviations and confidence intervals for atmospheric design criteria used in WECS development. W.T. Frost, University of Tennessee Space Institute, U.S.A.	107
B4* On the costs and benefits of siting a wind turbine in the mountains of New Hampshire. W.T. Downey, Arthur D. Little Inc., U.S.A.	
B5* The Southern Californian Desert wind energy assessment. E.X. Berry, Atmospheric Research & Technology, Inc., U.S.A. J.B. Park, Helion Inc., and R.K. Hauser and W.G. Lane, California State University at Chico, U.S.A..	
<b>SESSION C: DESIGN CONSTRUCTION &amp; PERFORMANCE (1)</b>	
C1 Development of composite blades for large wind turbines. H.W. Gewehr, Kaman Aerospace Corporation, U.S.A.	133
C2 Development and design of a large wind-turbine-blade. M. Hahn and P.M. Wackerle, Messerschmitt-Bolkow-Blohm GmbH, Federal Republic of Germany.	141
C3 Evolution of the flexible blade concept (vertical axis windmills). J. M. De Lagarde, Aerowatt-E.N.S.A.M., France.	159
<b>SESSION D: DESIGN, CONSTRUCTION &amp; PERFORMANCE (2)</b>	
D1 Combined effects of deterministic and random loads in wind turbine design. A. Raab, SIKOB AB, Sweden.	169
D2 Load cases for wind energy conversion systems. G. Tornkvist, Saab-Scania AB, Sweden.	183
D3 Application of the finite element method to the study of the behaviour of blades of industrial wind energy systems. J. Sorel, D. Bainville, M. Maegey, French Atomic Energy Commission, France, J.M. Noel and G. Seger, Aerowatt Company, France.	193
D4 On wind turbine power measurements. S. Frandsen and C.J. Christensen, Riso National Laboratory, Denmark.	207
<b>SESSION E: DESIGN, CONSTRUCTION &amp; PERFORMANCE (3)</b>	
E1 Description of the two Danish 630 kW wind turbines, NIBE-A and NIBE-B, and some preliminary test results. B. Maribo Pedersen, Technical University of Denmark, and P.Nielsen, D.E.F.U., Denmark.	223
E2 The conceptual design of the high-speed ratio rotor for the 52 m diameter horizontal axis Voith wind energy converter. W. Weber, Voith Getriebe KG, Federal Republic of Germany.	239
E3 Drive train assembly of the Swedish WTS 3. N.G. Byggeth, K.E. Hallsten and L. Thoreson, Karlskronavarvet AB, Sweden.	253
<b>SESSION F: DESIGN, CONSTRUCTION &amp; PERFORMANCE (4)</b>	
F1 Alternator designs for direct coupling to remote wind energy systems. R.W. Menzies, R.M. Mathur, University of Manitoba, Canada, and W.R. Bullock, Bristol Aerospace Ltd., Canada.	269
F2 Dynamic characteristics of a wind driven induction generator equipped with thyristor controlled inductances on the stator side. Abdel-Aty Edris, Chalmers University of Technology, Sweden.	279
F3 Some aspects of small aerogenerator design and testing. I.K. Buehring, University of Exeter, U.K. and L.L. Freris, Imperial College of Science and Technology, U.K.	297
F4 Structural design and maintenance policies for large wind turbines. D.W. Bridson, University of Exeter, U.K. and P.J. Worthington, Central Electricity Research Laboratories, U.K.	307

**SESSION G: VERTICAL AXIS TURBINES**

- G1 Reynolds number effects on the aerodynamic performance of a vertical axis wind turbine. 323  
L.F. Jesch and D. Walton, University of Birmingham, U.K.
- G2\* A vertical axis wind energy converter with straight blades. 333  
H.G. Reimerdes, Institut für Leichtbau der RWTH Aachen, Federal Republic of Germany.
- G3 "L-180 Poseidon" - a new system concept in vertical axis wind turbine technology. 333  
O. Ljungstrom, Aeronautical Research Institute of Sweden.

**SESSION H: HORIZONTAL AXIS TURBINES**

- H1 A vortex-wake analysis of a horizontal-axis wind turbine and a comparison with a modified blade-element theory. 357  
M.B. Anderson, Cavendish Laboratory, University of Cambridge, U.K.
- H2 The 25 m experimental horizontal axis wind turbine (25 m HAT). 375  
F.J.C. Schellens, FDO Technische Adviseurs B.V., Netherlands.
- H3 Tests performed on the 2 MW Tvind WECS. 391  
S.A. Jensen and E.T.D. Bjerregaard, Danish Ship Research Laboratory, Denmark.

**SESSION J: WAKES & CLUSTERS**

- J1 The efficiency of wind turbine clusters. 401  
C. Maclean, Rutherford Laboratory, U.K., E.A. Bossanyi, G.E. Whittle, P.D. Dunn, N.H. Lipman, and P.J. Musgrove, University of Reading, U.K.
- J2 Modelling of wind turbine arrays. 417  
P.J.H. Builtjes, The Netherlands Organisation for Applied Scientific Research, and D.J. Milborrow, Central Electricity Research Laboratories, U.K.
- J3 An experimental analysis of wind turbine wakes. 431  
P.E.J. Vermeulen, TNO-Apeldoorn, The Netherlands.
- J4 On wake decay and row spacing for WECS farms. 451  
P.A. Taylor, Atmospheric Environment Service, Canada.
- J5 Some properties of the wake behind horizontal axis wind turbines. 469  
P.H. Alfredsson, F.H. Bark, The Royal Institute of Technology, Stockholm, Sweden, and J.A. Dahlberg, The Aeronautical Research Institute of Sweden.

**SESSION K: SMALL SCALE APPLICATIONS**

- K1 The status of windpower research and development for space and water heating in the United States. 485  
D.E. Cromack, J.G. McGowan and W.E. Heronemus, University of Massachusetts at Amherst, U.S.A.
- K2 Low speed water pumping windmills: rotor tests and overall performance. 501  
H.J.M. Beurskens, A.J.F. Hageman, G.D. Hospers, A. Kragten and E.H. Lysen, Eindhoven University of Technology, Netherlands.

- K3 Substitution of diesel power plants by solar and wind electricity generators, A case study for a tropical island. 521  
R. Minder, Electrowatt Engineering Services Ltd., Switzerland, and D. Gilby, Electrowatt Engineering Services Ltd., U.K.

**SESSION L: SYSTEM INTEGRATION**

- L1 A regional wind-hydro electricity supply system. 533  
B. Sørensen, The Niels Bohr Institute, University of Copenhagen, Denmark.
- L2 A simulation model of an electricity generating system incorporating wind turbine plant. 545  
G.E. Whittle, E.A. Bossanyi, P.D. Dunn, N.H. Lipman, P.J. Musgrove, University of Reading, U.K. and C. Maclean Rutherford Laboratory, U.K.
- L3 The capacity credit of wind power: a numerical model. 555  
B. Martin, Australian National University and M. Diesendorf, CSIRO, Australia.
- L4\* Power system value of large WECS. 555  
K. Slater, Slater Energy Consultants, Inc., Canada and M. Lodge, The Institute of Man and Resources, Canada.

The following papers were accepted for publication only and will not be presented:-

- X1 Wind energy in Argentina 565  
R.A. Bastianon, Research and Development Naval Service, Argentina.
- X2 Wind energy in Senegal: Geographical repartition. 571  
D. Le Gourieres, University of Dakar, Senegal.

\*These papers were not available at time of publication and are issued separately.
